                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
            The present sequence is that of cDNA encoding a protein (see AAB19907) CC capable of binding human interleukin-13 and/or human interleukin-24 (IL-4) in the presence of IL-4 receptor alpha. To isolate the cDNA, PCR or isolated from a database using mouse IL-13 receptor alpha. To isolate the cDNA, PCR coll cDNA. The presence using mouse IL-13 receptor alpha. The primers were used to amplify human IL-13 receptor cDNA from activated tonsilar B cell cDNA. The resulting cDNA fragment was used to screen a lambda gt10 cell cDNA. The resulting cDNA fragment was used to screen a lambda gt10 cell cDNA. The primers cell cDNA insert provided the present sequence. This IL-13 receptor alpha-1 can be used to inhibit IL-13 or IL-4 induced IGE synthesis in B cells, useful in the treatment of diseases where IGE or Th2 differentiation plays a role, e.g. atopy, atopic dermatitis, allergy, rhinitis, ecdema, asthma or AIDS. Antibodies raised against the polypeptide are useful for detecting IL-13 and IL-4 receptor or parts of them which have been shed contentials, allergies, rhinitis, eczema, asthma, AIDS, lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polypeptide capable of binding interleukin-13 or interleukin-4 useful for treating atopy, atopic dermatitis, allergies, rhinitis, eczema, asthma or AIDS.

Treating a disease in which interleukin (IL)-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS, comprises administering a polypeptide or soluble polypeptide.

1; SEQ ID NO 8; 27pp; English.

The invention relates to polypeptides capable of binding human interleukin (IL)-13 and/or IL-4 in the presence of IL-4 Ralpha. The invention also relates to a method of treatment of a disease in which III3 and II4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha (IL-13 Ralpha) cDNA.

                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid molecule (ADN62574), CC which encodes the mature form of a polypeptide capable of binding human CI II-13 (interleukin 13) and/or binding human II-4 (designated II-13 CC receptor alpha 1 subunit) appearing as ADN62575. Also included are a cector comprising the nucleic acid molecule and a host cell comprising the vector comprising the nucleic acid molecule and a host cell comprising the vector comprising the nucleic acid molecule and a host cell comprising the vector comprising to a lelic variation. The polypeptides are useful for binding the comprision of the vector allelic variation. The polypeptides are useful for binding the number of the interfering with the interaction between human II-13 or II-4 and their contrains receptors. They can also be used in medicine, e.g. for treatment contrains a such as atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma, AIDS, cancer, inflammatory disease (e.g. rheumatoid arthritis and contrains and latendary boxels, psoriasis, thus contrains they contrains and leichmaniasis, ulcerative colitis, contrains, nephrotic syndrome, glomerulonephritis, ulcerative colitis, contrains disease, tuberculosis, malaria and leichmaniasis. They can also be used for producing antibodies, which can be used for diagnosing diseases. They can also be contrained to the present sequence encodes II-13 receptor alpha 1 subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 1348;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NO:88.
```

The present invention describes a new composition comprising an antisense coligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, cantiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. is chaemic conditions, pulmonary vascoonstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including threat and prostate cancer. The reduction of the adenosine content of the conchoconstriction and inflammation. AAA32313 to AAA33312 represent the concluding the content of the prochoconstriction and inflammation. nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 18 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 160 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence 185

Low adenosine (A) content antisense oligonuclectides which do no adenosine receptors during metabolism, useful e.g. for treating and respiratory obstructions. not cancers

1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and

The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                         Detecting granulocyte activation by detecting genes associated with granulocyte activation,
                                                                                                                                                                                                                                            Claim

CC pathogen or sterile inflammatory disease using the gene expression CC profile; (3) detecting (MA) an inflammation (especially chronic) in a CC tissue, an allergic response in a subject, exposure of a subject to a cxpression in a sample of the tissue of gene(s) from Gs, where the level of cexpression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile conflammatory disease, by contacting a tissue having inflammation with an eagent that modulates the expression of gene(s) from Gs in the tissue. MI conflammation in a tissue; M is useful for modulating GA, M3 is useful for screening an agent capable of modulating GCA preferably in an CC (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, conditions in the tissue, an allergic response in a subject, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult creative colities, periodontal disease; also bacterial infection, parasitic infection, protozoal infection, conditions The present sequence represents a gene differentially.
                                                                          conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. full-length cDNA clone C of Homo sapiens (human). 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                    _
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Li,W.B., Gruber,C., Jessee,J. and Polayes,D. Tissue Procurement: Dr. Michael Brownstein and Dr. Miklos Palko
cDNA Library Preparation: CLONTECH Laboratories, Inc.
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Agencourt Bioscience Corporation
Clone distribution: MGC clone distribution information can be
found through the I.M.A.G.E. Consortium/LLNL at:
http://image.llnl.gov
Plate: NDCM154 row: a column: 16
High quality sequence stop: 651.
